QuantLab Event on May 12, 2025:

Quantitative Text Analysis for Social Sciences

Seminar on: This talk will examine the evolution of quantitative text analysis in economics and political science over the last two decades. The presentation will cover key methodologies including topic modeling and text classification with BERT and will discuss the emerging applications of Large Language Models for text analysis.

Presented by: Dr. Maxim Ananyev is a Research Fellow at the Melbourne Institute: Applied Economic and Social Research, University of Melbourne, specializing in applied microeconomics and political economy. His research on the topics of social trust, identity, political institutions, and media was published in leading journals such as the Economic Journal, World Development, Journal of Economic Behavior and Organization. Maxim has a strong methodological background combining economics, political science, and statistics. He is an active contributor to policy research through engaged projects with Australian foundations and agencies.

BYO Lunch!

When: 12-1pm
Where: Linkage, 4th floor, John Medley Building, Parkville
